Full Stack Developer with **2 years of experience** solving complex engineering challenges and delivering **scalable, production-ready** web applications. Adept at **quickly learning** and applying new technologies to build robust **e-commerce** and POS platforms. Proven track record of reducing infrastructure **costs**, **optimizing** performance, and improving customer experience through **clean architectures**, efficient **backend** engineering, and innovative **problem-solving**. Skilled in **Java**, **Spring Boot**, **REST APIs**, and database design, with additional expertise in **SvelteKit** and **TypeScript**.

EXPERIENCE

Full Stack Developer

January 2024 – Present

Tech Inject LLP

Punjab, India

- **Scaled** a **high-traffic** IP-based redirection service to **10k+** daily requests by designing a **Redis** TTL-based caching layer and **multi-token** traffic distribution, eliminating paid infrastructure upgrades while maintaining **low latency** and **zero downtime**.
- **Implemented** an LRU caching layer for recently viewed products, reducing redundant queries by **70%+**, improving response time by **40%**, and driving a **12%** increase in conversions through enhanced user experience.
- Reduced **Firestore** read costs by **40×** by optimizing queries and document structures—achieved **scalability** and **cost-efficiency** without relying on external caching.
- Automated **packaging** workflow with **EshopBox** integration, cutting fulfillment time and improving **inventory accuracy**, resulting in faster order dispatch and fewer stock discrepancies.
- **Designed** and shipped a scalable **POS backend system** enabling real-time billing, inventory synchronization, and financial reporting, improving checkout speed by **30%** and reducing manual reconciliation efforts by **50%**.
- Engineered a **reusable, modular checkout flow** supporting **discounts**, **reward points**, and Razorpay payments—improving conversion rates and reducing duplicate engineering efforts across product lines.
- **Engineered** a **fault-tolerant notification service** with **task queue**, retry logic and structured error handling, achieving **99%** delivery success across email and WhatsApp for customer communication.
- Developed a streamlined **returns & exchange process**, reducing customer friction and operational overhead while **improving post-purchase satisfaction**.

Full Stack Developer Intern

June 2023 – Nov. 2023

Goldlane

Bangalore, Karnataka

- Developed a user-friendly demo booking website, increasing bookings from **zero to 3–5 daily**.
- Led the front-end design of SIP Admin Webstore serving **20,000+ users**, implementing file uploads and integrating APIs to improve user experience and data handling.

PROJECTS

BoltBill | *TypeScript, Svelte Kit, Firebase Functions, Firestore*

Aug 2025 – Present

- Designing an **API-first service** that generates **custom-branded PDF invoices** as array buffers, enabling **seamless integration** into existing business workflows.
- Building a **dashboard** with template selection and branding tools, allowing teams to automate invoice generation while maintaining consistent design and scalability.

Quick Neons | *TypeScript, Svelte Kit, Firebase Functions, Firestore*

March 2025 – Present

- Built a custom product ordering interface for **personalized neon signs** with dynamic checkout flow and responsive design.
- Enhanced user experience through intuitive UI, supporting seamless customization and higher conversion rates.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, MySQL, Firestore, NoSQL, HTML/CSS

Frameworks: Spring Boot, SvelteKit, Node.js, Firebase Functions

Developer Tools: Git, Vercel, Google Cloud Platform(GCP), VS Code, WebStorm, Cursor, AI Tools

Integration: Razorpay, Resend, EshopBox, WATI, NodeMailer

Soft Skills: Leadership, problem solving, teamwork, communication

EDUCATION

Lovely Professional University

Bachelor of Technology in Computer Science

Punjab, India

Aug. 2019 – May 2023
